Why use Easy filter clean?

Proper filtration is essential for a crystal clear, healthy pool.
A clean filter saves you money, chemicals and hassles.

Why do I need this product?

Normal backwashing only partially cleans the filter sand. Over time, oils and other contaminants stick to the sand and can not be backwashed out. Using this twice a year keeps filtration in peak condition, and prevents filter related problems.

Symptoms of a clogged filter:

1. The pool cleaner moves slowly or stops - an indication that the sand is clogged up is when the pool cleaner moves much faster when multiport valve is set on "bypass".
2. The pool water never really gets to that crystal clear condition - when the sand is clogged all the water forces its way through the easiest route in the filter and can not get clean.
3. Test your filter - compare the force of the water coming out of the return jet when the multiport valve is set on "filter" compared to when it is set on "bypass". If the water flow is much stronger on "bypass" then the sand needs backwashing or "Easy Filter Cleaning"

Directions:

1. Remove the vacuum lid and leaf basket from the weir.
2. Pour all the Easy Filter Clean into the weir.
3. Set the multiport valve on "BACKWASH" and switch the pump on for 15 seconds so that the product gets sucked into the sand filter, then switch the pump OFF.
4. Allow 30 minutes for the oils and dirt to soften up with the Easy Filter Clean and then backwash thoroughly until the backwash water clears.

NOTE: If you think the sand is too old, change it or contact us for more info.

Warnings:

Harmful if swallowed. Handle with care. Store away from food. Keep out of reach of children. Avoid contact with eyes and skin. Keep away from other chemicals.

First aid:

If swallowed drink large amounts of milk or water and seek medical advice, showing this package. Eye contact - rinse immediately with lots of water and seek medical advice, showing this package. Mouth contact - rinse with water. Skin contact - rinse with water.
